Kansas Oral Health 2024 REPORT CARD

State Score:

ORAL HEALTH KANSAS
ADVOCACY • PUBLIC AWARENESS • EDUCATION

The Kansas grade is compared to the nation's performance on 17 key oral health indicators. This report card illustrates the oral health challenges in our state. Kansans can work together to improve these grades and the oral health and overall health of all of our residents.

Indicator

Grade

CHILDREN: ENROLLED IN MEDICAID

1	23% of ages 1-2 received a preventive dental care visit	C
2	49% of ages 3-5 received a preventive dental care visit	C
3	48% of ages 1-20 received a preventive dental care visit	B
4	20% of ages 6-14 received dental sealants on permanent molars	A

CHILDREN: GENERAL POPULATION

5	85% of ages 1-17 received one or more dental visits last year	C
6	10% of ages 1-17 have decay experience in the last year	A
7	55% of third graders have decay experience	C
8	17% of third graders have untreated decay	B
9	42% of third graders have dental sealants on permanent molars	C
10	10% of high school students drink soda 2 or more times per day	D

ADULTS

11	67% of ages 18-64 visited the dentist in the last year	C
12	29% of ages 65+ have lost six or more teeth due to tooth decay or gum disease	C
13	12% of ages 65+ have lost all of their natural teeth due to tooth decay or gum disease	C
14	68% of adults with diabetes visited the dentist	C
15	49% of pregnant women had their teeth cleaned during pregnancy	C

GENERAL POPULATION

16	65% of Kansans have access to fluoridated water (natural or adjusted)	D
17	39% of needs were met in Dental Health Provider Shortage Areas	B

16	% of Kansans have access to fluoridated water (natural or adjusted)	▲	65.4	72.7	10.6% ▼	1	D
17	% of needs were met in Dental Health Provider Shortage Areas	▲	38.5	32.1	18.1% ▲	3	B
US COMPARISON						2.3	C

Method

The 17 indicators were chosen based on the following characteristics:

- Recent data are available
- The indicator shows change over time
- The indicator increases awareness of the importance of oral health
- The indicator is meaningful for advocacy and education efforts
- The data examine demographic characteristics
- The indicator is tracked at the national level & state level for comparison

The data percentages were turned into number/letter scores by comparing the Kansas data to national data. This national comparison grade was determined using the percentage difference between the Kansas and US data percentages. The percentage difference formula was used to calculate the relative difference between Kansas’ percentages and the national percentages.

Based upon the desired trend of the indicator, the percentage difference is classified as either “better” or “worse” than the national average. The percentage difference was then converted into a numerical point value and letter grade in the table.

Percentage Difference Formula

$$\frac{|V_1 - V_2|}{\left(\frac{V_1 + V_2}{2}\right)} \times 100 = \text{Percent difference of Kansas from National}$$

V₁ = Kansas Percentage

V₂ = US Percentage

Grade	Points	Criteria
A	4	20%+ better than US
B	3	10.1 – 19.9% better than US
C	2	0 – 10% change from US
D	1	10.1 – 19.9% worse than US
F	0	20%+ worse than US

Acknowledgements

This report is based on [a report card from the Oklahoma Oral Health Coalition](#) published in 2020 and a series of [report cards from the Texas Oral Health Coalition](#). We are grateful to our partners in Oklahoma and Texas for the opportunity to present their report card model and research in the state of Kansas. Special thanks to Devaki Menon, who conducted the research for the 2024 Report Card.
